

## Quality, Integrity and Independence

### Internat Energy

Solutions Canada (IESC) is an independent engineering consulting company dedicated to the creation of a more sustainable economy, government and society. Our mission is to help governments, business and individual households create more wealth and employment, protect and enhance human and natural capital, and to increase profit and competitive advantage through the application of sustainable design, energy efficiency and renewable energy principles.

Our team of independent engineers and energy consultants are committed to bringing value to society by helping our clients become more efficient, less dependent on external energy supplies, and less disruptive to the environment in which they are embedded. We believe that market-based solutions can help foster the societal transformation required in order to reduce Greenhouse Gas emissions, slow the depletion of our world's natural resources, and reduce our ecological footprint, for the benefit of current and future generations.

### Our Mission:

IESC is taking a lead role in helping clients develop comprehensive energy management solutions of the highest quality, for sustainable buildings and operations, through three core pillars: energy conservation and efficiency; GHG reduction strategies; and the integration of renewable energy production.

### Our Vision:

To revolutionize the industry and bring about fundamental change in the way we produce, consume, and think about

energy, to facilitate the integration of social, environmental and economic objectives in energy management, and foster a sustainable economy for current and future generations.

Our Values:

Leadership

Innovation

Independence

Quality

Integrity
